

# PostScript Errors from Quark 4 Files

## Xitron Navigator Technical Note

December 2, 1998

Xitron has had reports of unexplainable PostScript errors occurring when printing from Quark 4. In most cases the user had opened a Quark 3.32 or earlier document in Quark 4, changed the file, resaved it as a Quark 3.32 document and then printed to the RIP. Somewhere in this process an improper conversion takes place, causing incorrect PostScript to be generated when printing from Quark 4.

We have found that this problem can be solved by saving the file as a Quark 4 document, closing the file, re-opening it in Quark 4 and then printing the file.
